

## Your Role

- Take operational ownership of a modern low latency broker and trading architecture including the further development of operations, monitoring and maintenance
- Own service quality, system robustness, operational integrity and increasing the quality across the board
- Architect and build solutions that will further advance internal monitoring & operations such as auditing, ACL systems, Intrusion detection systems, etc.
- Conduct proactive research to further harden the security of all our products and services
- Develop internal security protocols and further expand our security awareness training program

## Your Profile

- You have gained already 3+ years professional experience in architecting, developing and maintaining complex systems and scalable microservice architectures
- Strong experience with cloud environments like Google Cloud, Azure or AWS
- Deep understanding of internet protocols and computer networks (DNS, TCP/UDP, Cloudflare)
- Deep understanding of databases (PostgreSQL, SQLite, Casandra, etc)
- Experience with CI/CD pipelines (e.g. Jenkins, CircleCI)
- Ability to balance security risk and product advancement
- Hands-on attitude and ability to drive solutions to completion
- Passion about security and high availability systems
- Experience with trading systems or crypto trading is a strong plus but not a must

## Our Offer

- A tightly knit team of experienced entrepreneurs & engineers with lots of interesting challenges
- A modern tech stack: Golang, Cassandra, Python, Kafka, PostgreSQL, Kubernetes, Docker, Kibana, Grafana
- Extensive individual and personal support to grow professionally
- Become part of a talented multinational team
